

WHAT IS CLAIMED IS:

1. A method for processing a call connection between a calling party and a called party, comprising:
 - making at least one analysis request;
 - receiving a request for the call connection from the calling party to the called party, the call connection being associated with the at least one analysis request;
 - recording dial stream information derived from the call connection; and
 - analyzing the recorded dial stream information to generate a result for the at least one analysis request.
2. The method according to claim 1, wherein the at least one analysis request is associated with at least one product or service.
3. The method according to claim 2, wherein the result for the analysis request determines a level of interest in the at least one product or service.
4. The method according to claim 1, further comprising:
 - determining a response to the request for the call connection; and
 - recording the response to the request for the call connection.
5. The method according to claim 1, further comprising:
 - requesting permission to provide the recorded dial stream information to a recipient.
6. The method according to claim 5, further comprising:
 - providing the result to the recipient based upon the requested permission.

7. The method according to claim 6, further comprising:
 - billing the recipient for the result.
8. A system for processing a call connection from a calling party to a called party, comprising:
 - means for making at least one analysis request;
 - means for receiving a request for the call connection from the calling party to the called party, the call connection being associated with the at least one analysis request;
 - means for recording dial stream information derived from the call connection; and
 - means for analyzing the recorded dial stream information to generate a result for the at least one analysis request.
9. The system according to claim 8, wherein the at least one analysis request is associated with at least one product or service.
10. The system according to claim 9, wherein the result for the analysis request determines a level of interest in the at least one product or service.
11. The system according to claim 8, further comprising:
 - means for determining a response to the request for the call connection;
 - and
 - means for recording the response to the request for the call connection.
12. The system according to claim 8, further comprising:
 - means for requesting permission to provide the recorded dial stream information to a recipient.

13. The system according to claim 12, further comprising:
 - means for providing the result to the recipient based upon the requested permission.
14. The system according to claim 13, further comprising:
 - means for billing the recipient for the result.
15. A computer readable medium capable of configuring a computer to perform a method of processing a call connection from a calling party to a called party, comprising:
 - receiving a request for the call connection from the calling party to the called party, the call connection associated with at least one analysis request;
 - recording dial stream information derived from the call connection; and
 - analyzing the recorded dial stream information to generate a result for the analysis request.
16. The computer readable medium of claim 15, wherein the at least one analysis request is associated with at least one product or service.
17. The computer readable medium of claim 16, wherein the result for the analysis request determines a level of interest in the at least one product or service.
18. The computer readable medium of claim 15, further comprising:
 - determining a response to the request for the call connection; and
 - recording the response to the request for the call connection.
19. The computer readable medium of claim 15, further comprising:

requesting permission to provide the recorded dial stream information to a recipient.

20. The computer readable medium of claim 19, further comprising:
 - providing the result to the recipient based upon the requested permission.
21. The computer readable medium of claim 20, further comprising:
 - billing the recipient for the result.
22. Apparatus for processing a call connection from a calling party to a called party, comprising:
 - a receiver for receiving a request for the call connection from the calling party to the called party, the call connection associated with at least one analysis request;
 - a recorder for recording dial stream information derived from the call connection; and
 - an analyzer for analyzing the recorded dial stream information to generate a result for the analysis request.
23. The apparatus according to claim 22, further comprising:
 - a processor for determining a response to the request for the call connection; and
 - a recorder for recording the response to the request for the call connection.
24. The apparatus according to claim 22, further comprising:
 - a requester for requesting permission to provide the recorded dial stream information a recipient.

25. The apparatus according to claim 24, further comprising:
 - a transmitter for providing the result to the recipient based upon the requested permission.
26. The apparatus according to claim 25, further comprising:
 - a billing system for billing the recipient for the result.
27. A system for processing calls, comprising:
 - means for receiving a request to initiate a call from a calling party, including information sufficient to identify a device associated with a called party;
 - means for associating at least one analysis request with the call;
 - means for recording dial stream information associated with the call; and
 - means for analyzing the recorded dial stream information, such that information reflecting a result of the analysis is provided in response to the analysis request.
